

Exercise to practice the GitHub submission

I am Rishu Kumar a PhD researcher at IIT (ISM) Dhanbad, India. working on silicon photonics, optical phased arrays (OPAs), and integrated beam steering for LiDAR applications. I am interested in using a suitable SOI/silicon photonics PDK to design scalable 1D/2D OPAs operating around 1550 nm. I would like to work with waveguides, MMI splitters, grating antennas, thermo-optic phase shifters, and large-scale $1 \times N$ architectures, followed by circuit simulation, GDS generation, and foundry fabrication/tape-out. I would also be interested in OPA/LiDAR examples, PDK documentation, compact models, and design rules.
